CLOUD SUPPORT & DEVOPS | KUBERNETES | GITOPS | INFRASTRUCTURE AUTOMATION

PROFESSIONAL SUMMARY

OCI-certified Computer Engineering graduate with hands-on experience in NOC monitoring, enterprise SaaS technical support, Kubernetes infrastructure, and Azure cloud projects. Skilled in infrastructure as code, CI/CD, GitOps, observability, cloud networking, Linux, and technical troubleshooting. Ready to contribute in a Cloud Support or DevOps role.

TECHNICAL SKILLS

Cloud & Infrastructure: OCI; AWS (EC2, VPC, security groups, subnets, routing); Azure Functions; Cosmos DB; Terraform; Proxmox

Containers & Delivery: Kubernetes (k3s), Docker, Helm, Argo CD, Jenkins, GitHub Actions, Git, YAML, OIDC

Observability: Prometheus, Grafana, Azure Application Insights, Log Analytics

Systems & Networking: Linux (Ubuntu), Windows Server, Active Directory, TCP/IP, DNS, VPN, Tailscale, SSH, RDP

Development & Automation: Python, Bash, PowerShell, Jira, technical documentation

Security: Endpoint Security, Trend Vision One Server and Workload Protection

PROFESSIONAL EXPERIENCE

NOC Engineer L1

BB Wave Inc. | Jul 2026 - Present

- Monitor Grafana dashboards, metrics, logs, and traces to identify service anomalies and operational alerts, enabling timely incident detection and escalation.
- Investigate incoming alerts through initial triage and documented analysis, ensuring issues are escalated to DevOps Engineers with relevant technical context.
- Produce detailed daily shift reports covering alerts, incident status, observations, and escalations, improving visibility and continuity across NOC shift handoffs.
- Support CI/CD pipeline deployment activities using Jenkins, contributing to application delivery and DevOps operational workflows.
- Initiated and developed Central Hub, a self-directed internal tool for the NOC team, beginning with a daily shift report builder to standardize report creation and reduce repetitive manual work.

Technical Support Engineer, Endpoint Security SaaS

TrendAI | Pasig City | Aug 2025 - Feb 2026

- Resolved 80+ enterprise technical cases involving endpoint deployment, policy configuration, connectivity, networking, systems, and cloud infrastructure while meeting SLA requirements.
- Troubleshoot hybrid Windows/Linux environments using Trend Vision One Server and Workload Protection for global SMB clients, supporting timely issue resolution.
- Provisioned AWS environments using EC2, VPCs, security groups, subnets, and routing to reproduce customer configurations and validate reported issues.

PROJECTS

Cloud-Backed Portfolio | End-to-End Cloud and DevOps Project

- Built and deployed a cloud-backed portfolio on GitHub Pages with Python Azure Functions APIs and Azure Cosmos DB persistence.
- Provisioned Azure resources with Terraform and implemented GitHub Actions CI/CD using OIDC authentication, production-readiness checks, path-specific deployments, and smoke verification.
- Implemented Application Insights and Log Analytics observability, health and visitor APIs, automated testing, security checks, and a provider-neutral AI portfolio assistant.

Kubernetes Home Lab | Self-Directed Infrastructure Project

- Built and maintain a k3s cluster on repurposed x86 hardware running Proxmox, providing a self-hosted environment for containerized workloads and infrastructure experimentation.
- Established GitOps delivery with Argo CD and declarative manifests in Git, enabling automated synchronization and repeatable deployments.
- Implemented Prometheus and Grafana observability and configured a Raspberry Pi as a Tailscale VPN node for secure remote access to the homelab, supporting monitoring and remote administration.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Engineering

National University Baliwag | Baliwag, Bulacan | Aug 2021 - Aug 2025

Thesis: IoT Integrated Consultation System for Enhanced Student-Faculty Interaction

Certifications: Oracle Cloud Infrastructure (OCI) Foundations Associate | Trend Vision One Server and Workload Protection Professional | GitHub Foundations
